HARDWOOD FLOORS are perfectly sanitary, clean, and easy to care for. Plans for a new house are scarcely considered complete without provision being made for them. In old houses the work is readily laid over original floors, taking the place of carpets.

We manufacture all kinds of plain and ornamental flooring, from simple strips and squares to the most elaborate parquetry designs. We also make all thicknesses of "tongue and groove" flooring.

The flooring that can be laid with the greatest ease and economy is $\frac{5}{16}$ inch thick with square edge. This booklet shows the most popular and best designs in this thickness. These patterns can all be made $\frac{1}{2}$ or $\frac{13}{16}$ inch thick as desired; the fancy designs by gluing to a backing; the plain ones by using separate pieces of solid oak with tongue and groove on edges.

The borders are made up in 12 foot lengths. The fancy fields are made up in convenient sized slabs for laying. The simple oak designs are composed of $1\frac{1}{3}$ or 2 inch slats assembled in squares, hexagons, etc., on canvas. This canvas is simply to hold together, in convenient form for handling, the carefully selected slats or short strips until the flooring is nailed down. The herringbone (No. 706) is supplied in separate pieces.

The price of the simpler designs approximates that of a good carpet. If given attention the floor never wears out. House cleaning is made easy and there are never any heavy sweeping days where our hardwood flooring is installed. A fine hardwood floor gives an air of refinement and elegance to any residence, store or public building.

We have agents in the large cities. Being experts in this line, they will do the work quicker and with less trouble to the purchaser than one who does not make a regular business of floor laying. Any good carpenter, however, can lay these floors by following our plans and instructions for laying and finishing.

Send us a rough sketch of rooms with accurate measurements and we will give you exact estimate of cost of the flooring.

When necessary, symmetrical corner pieces will be made for any border shown, as illustrated on page 2.

NO. 1 QUARTERED WHITE OAK STRIPS
MAHOGANY BORDER STRIPS WITH CORNER NO. 1030

WE own the white oak forests which are our source of supply, and operate our own sawmills and lumber yards where the lumber is cut and seasoned. Having dry kilns at sawmills and factory, we can give absolute assurance of thoroughly seasoned and perfectly dry flooring. The flooring is kept in heated stock rooms until the moment of shipment, so that it is always in perfect condition. The last point alone makes our flooring, of all kinds, vastly superior to the ordinary lumber yard variety, which has been exposed to damp air and has absorbed moisture while piled in unheated lumber sheds.

Indiana quartered white oak is the basis of our work. We carry in addition many other domestic and imported woods; these affording, in their natural, unstained beauty, almost every color except bright blue.

As we are anxious that any flooring bought from us may result in such a finished floor as to be an advertisement for us, we supply full directions for laying and finishing.

FINISHING MATERIAL

Suitable brads or nails can generally be procured through the larger hardware stores. We have special kinds for the different thicknesses of material and can ship along with the flooring.

We can also supply filler and high grade white shellac in packages of suitable size.

Our wax insures a fine glossy finish. The ease with which it can be renewed makes it the most economical and easily cared for of finishes.

Our weighted polishing brushes are so constructed that the power used to push the brush is applied where it is most effective in getting a high polish on the waxed floor.
